3 Method

3.1 Overview

[TODO: 给出方法总览。建议先放一张系统流程图，再说明输入、核心模块和输出。]

3.2 Problem formulation

Let $\mathcal{X}$ denote the input space, $\mathcal{Y}$ the output space, and $f_\theta : \mathcal{X} \to \mathcal{Y}$ the proposed model or procedure. Given a training set $\mathcal{D} = \{(x_i, y_i)\}_{i=1}^n$, the generic objective is

$$\min_\theta \frac{1}{n} \sum_{i=1}^{n} \mathcal{L}\big(f_\theta(x_i), y_i\big) + \lambda\, \Omega(\theta), \tag{1}$$

where $\mathcal{L}$ is the task loss, Ω is an optional regularizer, and λ controls its strength. Replace this generic formulation with the notation and objective specific to your work.

[TODO: 定义最关键的模块、公式、假设和设计选择。解释每个符号及其作用。]

3.4 Analysis and implementation details
